## DETAILED ACTION

### *Election/Restrictions*

Claims 23-30 and 53-67 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected claimed invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 07-05-05.

### *Claim Objections*

Claim 68 is objected to because of the following informalities: in line 4, "conductors" should be "conductor." Appropriate correction is required.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-22, 31-52 and 68-70 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,864,766 in view of Keung et al. [US 5,933,063]. 6,864,766 disclose everything claimed except the use of a latched reset lockout with the interrupting device.

Art Unit: 2832

Keung et al. discloses a circuit interrupter having a latched reset lockout [60] to prevent reestablishment of electrical continuity in an interrupter circuit. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the reset lockout with the interrupter of 6,864,766 in order to disable resetting the circuit in a fault, or non-operational, condition.
